Richard Mariner was a successful Wall Street executive with a lucrative career and a comfortable life. However, everything changed when he witnessed the devastating effects of climate change firsthand. Deeply disturbed, he left his job and dedicated his life to raising awareness about the urgent threat posed by global warming.

Mariner's journey took him to the Arctic, where he saw the melting ice caps and experienced the profound impact of climate change on the environment and local communities. He also met with scientists, policymakers, and indigenous leaders, gaining a deep understanding of the causes and consequences of climate change.

In his book, "Meltdown," Mariner shares his personal story and the insights he gained during his travels. He argues that climate change is not a distant threat but a clear and present danger that requires immediate action.

Mariner's message is clear: we need to reduce our emissions of greenhouse gases, invest in renewable energy, and adapt to the impacts of climate change that are already happening. He also emphasizes the importance of protecting the Arctic, which plays a critical role in regulating the global climate.

"Meltdown" is a powerful and thought-provoking account of one man's journey to understand and address the climate crisis. It is a must-read for anyone who cares about the future of our planet.

Mariner's Wall Street Background

Richard Mariner spent 25 years on Wall Street, where he worked as a managing director at Lehman Brothers and a senior vice president at Bear

Stearns. He was a successful investment banker and portfolio manager, and he earned a reputation for his intelligence and integrity.

However, Mariner also became increasingly concerned about the environmental impact of the financial industry. He saw firsthand how Wall Street's obsession with short-term profits was contributing to the climate crisis.

In 2007, Mariner left Wall Street to focus on climate change activism. He founded the Climate Leadership Council, a non-profit organization that advocates for a carbon tax and dividend system.

Mariner's Journey to the Arctic

Mariner's journey to the Arctic was a life-changing experience. He saw firsthand the melting ice caps, the dying polar bears, and the struggling indigenous communities.

He also met with scientists who were studying the impacts of climate change on the Arctic. He learned that the Arctic is warming at twice the rate of the rest of the planet, and that this is causing widespread melting of glaciers and sea ice.

The Arctic is also a major source of methane, a greenhouse gas that is 25 times more potent than carbon dioxide. As the Arctic warms, more methane is being released into the atmosphere, further contributing to climate change.

Mariner's experiences in the Arctic convinced him that the climate crisis is real and urgent. He believes that we need to take action now to reduce our

emissions of greenhouse gases and protect the Arctic.

Mariner's Activism and Advocacy

Since leaving Wall Street, Mariner has become one of the world's leading climate change activists. He has written extensively on the topic, and he has given speeches to audiences around the world.

Mariner is also a strong advocate for a carbon tax and dividend system. He believes that this is the most effective way to reduce emissions and transition to a clean energy economy.

Mariner's work has helped to raise awareness about the climate crisis and galvanize action to address it. He is a powerful voice for change, and his message is clear: we need to act now to protect our planet and our future.

Richard Mariner's journey from Wall Street to the melting ice caps is a story of hope and inspiration. It shows that one person can make a difference, and that it is not too late to address the climate crisis.

Mariner's message is clear: we need to reduce our emissions of greenhouse gases, invest in renewable energy, and adapt to the impacts of climate change that are already happening. We also need to protect the Arctic, which plays a critical role in regulating the global climate.

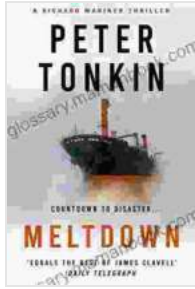

If we act now, we can avoid the worst impacts of climate change and create a sustainable future for our planet.
